PRESS RELEASE

For Immediate Release
 May 23, 2017

Metro Areas See Improvement in April's Unemployment Numbers

CARSON CITY, NV— All three metro areas experienced positive results in the labor market for April. In Las Vegas, the jobless rate remained at 4.8 percent and is down 1.2 percentage points from April 2016. The unemployment rate in Reno/Sparks, stands at 3.9 percent in April, and is below 4 percent for the first time since 2006. This is a decline of 0.3 percentage point from March and 1.4 percentage points from the same time last year. Carson City saw the largest over-the-year decline of 1.5 percentage points, with unemployment at 5 percent in April.

“All three metro areas followed the statewide trend with each unemployment rate experiencing a decline” said Bill Anderson, chief economist for Department of Employment, Training and Rehabilitation. “Additionally, all 17 counties are faring well with declining unemployment rates. Overall, the Silver State continues to show steady improvement in the labor market, with job growth on the rise.”

Key Points

Job growth over the year:

- Statewide: 3.6 percent/46,200
- Las Vegas: 3.4 percent/32,100
- Reno: 3.1 percent/6,700
- Carson City: 1.7 percent/500

ABOUT THE RESEARCH AND ANALYSIS BUREAU

The Research and Analysis Bureau is Nevada’s premier source for labor market information. A part of DETR, the Bureau is responsible for creating, analyzing, and reporting Nevada’s labor market information, in cooperation with the United States Bureau of Labor Statistics (BLS).

DETR is comprised of the Employment Security Division, Equal Rights Commission, Rehabilitation Division, and the Research and Analysis Bureau. DETR oversees the Nevada JobConnect System to provide training and job placement services to job seekers and to assist employers in hiring practices. It also supports economic development efforts through improving Nevada’s workforce.

NEVADA SUB-STATE LABOR MARKET OVERVIEW

April 2017

Nevada saw notable employment gains in the month of April. Expected seasonal employment remained positive, in part due to the ramp-up for summer-related tourism. Together, the State's three metropolitan statistical areas (MSAs) increased employment by a seasonally-adjusted 8,200 jobs. Las Vegas alone saw employment increase by 11,300 when only 3,800 jobs were expected based upon historical trends, resulting in a seasonally-adjusted increase of 7,500. Reno

Nevada Nonfarm Jobs: March - April Change

	Unadjusted Change	Expected Seasonal Movement	Seasonally Adjusted Change
Las Vegas	11,300	3,800	7,500
Reno	1,800	1,200	600
Carson City	300	200	100

increased its seasonally-adjusted payrolls by 600, after adding 1,800 jobs when only 1,200 were expected to be added. Finally, Carson City expanded seasonally-adjusted employment by 100, after adding 300 jobs when only 200 were expected. April's robust employment figures top 2017 in month-over-month unadjusted and seasonally-adjusted employment gains.

Over-the-year job growth increased in the State as a whole and in all MSAs this month. State-wide, job growth increased by 3.6 percent, which correlates to 46,200 new jobs added since April of 2016. In terms of percentage increase, Las Vegas had the highest growth rate at 3.4 percent over the year. Las Vegas added 32,100 jobs in total; 22,000 ser-

vice-providing and 9,000 goods-producing¹. Reno added 6,700 jobs over the same period, which equates to a 3.1 percent growth rate; payrolls gained 4,500 service-providing jobs and 1,500 good-producing jobs. In Carson City, 500 jobs were added over the year, a growth of 1.7 percent, including the addition of 300 service-providing jobs.

A location quotient (LQ) expresses how concentrated an industry/sector is in a region as compared to the nation. An LQ of one indicates that an area has the same concentration of a specific industry as the national average, whereas a value of less than one indicates a lower concentration, and a value greater than one indicates a higher concentration. This month we focus on the concentration of retail trade employment in Nevada's counties relative to the nation. Statewide, the LQ for retail trade is 1.01, suggesting that the Silver State's share of employment in this sector is nearly identical to that in the nation as a whole. Of the State's counties, Lincoln has the highest LQ for retail trade, with a value 1.33. This means that there is 33 percent more retail trade employment in the county than expected according to national averages. The State's major population centers each have an LQ very sim-

¹ References to total MSA employment are adjusted for seasonality, whereas references to goods-producing and service-providing industries are not.

ilar to the national average. The lowest LQ's are found in Eureka, Storey, and Esmeralda, suggesting that these counties have relatively low employment in the sector.

The Occupational Employment Statistics (OES) survey is a semi-annual mail survey measuring occupational employment and wage rates for wage and salary workers in nonfarm establishments in Nevada and all states. Statewide, the average hourly wage is \$20.58. This compares to \$23.23 in the nation as a whole. As for Nevada's metropolitan areas, both Carson City (\$22.23/hr.) and Reno (\$21.35/hr.) have mean wages above the Statewide norm. Las Vegas, at \$20.23/hr., comes in below. The highest median wage is found in a group of rural counties (Elko, Esmeralda, Eureka, Humboldt, Lander, Lincoln, Nye, Pershing and White Pine) including our northeastern counties with a heavy mining presence. As a group, this region has a median wage of \$23.09/hr. Although county-specific information for the region is not available, those counties where mining plays a significant role in the economy certainly have higher wages. A group of west central counties (Churchill, Douglas, Lyon and Mineral), at \$20.23/hr., come in just below the Statewide mean.

Following continuing reductions in the Statewide unemployment rate, all three metro areas saw over-the-year declines in unemployment of over one percent in April. In Las Vegas, the jobless rate held steady over the month at 4.8 percent, down 1.2 percentage points from April of last year². The jobless rate in Reno/Sparks, at 3.9 percent in April, is below four percent for the first time since 2006. This is a decline of 0.3 percentage point from March and 1.4 percentage

Following continuing reductions in the Statewide unemployment rate, all three metro areas saw over-the-year declines in unemployment of over one percent in April. In Las Vegas, the jobless rate held steady over the month at 4.8 percent, down 1.2 percentage points from April of last year². The jobless rate in Reno/Sparks, at 3.9 percent in April, is below four percent for the first time since 2006. This is a decline of 0.3 percentage point from March and 1.4 percentage

² The State's seasonally adjusted unemployment rate is 4.7 in April, down from 4.8 percent in March and down from 5.9 percent in April 2016. Unemployment rates for the State's metropolitan areas and counties reported here are not adjusted for seasonality. Hence, comparisons to the State's seasonally adjusted rate should be avoided. Legitimate comparisons, however, can be made to the State's unadjusted rate - 4.6 in April, down from 4.7 in March and down from 5.9 percent in April 2016.

points from the same time last year. Carson City saw the largest over-the-year decline, of 1.5 percentage points, with unemployment at five percent in April.

This month, all 17 of Nevada's counties saw declines in unemployment over the year, ranging from 2.2 percentage points (Storey) to 0.7 percentage point (White Pine). Lyon and Lander counties also saw large declines, of 2.1 and two percentage points, respectively. Six counties (Eureka, Esmeralda, Elko, Humboldt, Washoe, and Lincoln) have unemployment rates below four percent in April. Nye, Lyon, and Mineral counties have the highest jobless rates, ranging from six percent to 5.5 percent in April.

Initial claims for unemployment insurance at the county level continue to reflect the de-

clines seen Statewide. Through April, 15 of Nevada's 17 counties have seen year-to-date declines in the number of initial claims. Twelve of those counties have seen declines of ten percent or more. On a nominal basis, Clark County has seen the largest decline, with 3,650 fewer claims than last year. This is followed by Washoe, which has 590 fewer claims year-to-date, and Elko which has 200 fewer initial claims. Only two counties, Storey and White Pine, have seen increases in claims compared to last year.

Unemployment Insurance Initial Claims By County			
	April 2017 (Year-to-Date)		Change
	2017	2016	
Clark	37,750	41,396	-3,646
Washoe	6,989	7,578	-589
Elko	518	721	-203
Carson City	996	1,152	-156
Lyon	982	1,116	-134
Humboldt	187	305	-118

Nye	483	554	-71
Lander	61	131	-70
Pershing	42	78	-36
Mineral	58	79	-21
Churchill	324	343	-19
Eureka	12	19	-7
Lincoln	34	41	-7
Esmeralda	12	16	-4
White Pine	113	111	2
Storey	42	30	12

*County level totals are not directly comparable to Statewide monthly totals due to reporting differences.

Year-to-date online job posting activity is up in 13 of 17 counties in April³. Churchill is the lone rural county with a year-to-date job posting deficit (-170) from the same time last year. Douglas has seen the largest positive nominal change over last year, with 530 more online postings year-to-date. Elko (+470), Nye (+340), and White Pine (+250) have also shown nota-

³ Online job postings are obtained through DETR's Silver State Solutions initiative. Online job posting volume does not necessarily correlate with the level of job openings or hiring. Internal company hiring and union hiring are often not captured by online ads. High ad volume often occurs for occupations/industries that are having difficulty finding qualified candidates, high turnover positions/recurring openings, or when companies are building large candidate pools. Online job postings should only be used with caution when developing/analyzing time series trends due to the constant changes in the rate of online advertising usage and in the methods used for collecting the data.

ble gains. All metro areas in the State realized over-the-year declines in job postings. Clark posted over 48,500 ads for jobs, which summed to 5,500 less than last year. Washoe recorded 12,000 and Carson City posted 2,700 job ads this month. From the same period last April, job ads declined by 2,300 in Washoe and were 140 less in Carson City. Nationally, online job ads have decreased by ten percent year to date. Some of this difference is likely attributable to Craigslist, a major source of online job ads, expanding job posting fees to all of their U.S. markets. Despite the decline in job ad volume in the large metro areas, we are encouraged by the growth of online job postings in many of Nevada's rural counties.

Science, Technology, Engineering and Math (STEM) occupations, including clinical

healthcare jobs that require science training, made up about 32 percent of online job ad volume in the United States from January through April of this year. In Nevada, those same STEM occupations comprised about 30 percent of all online job ads. In three of Nevada's rural counties (Lincoln, Esmeralda, and Eureka), over half of job postings were for STEM occupations. The majority of these were in the healthcare field. Clark County was the only major population center to surpass the Statewide average, at just over 30 percent. Carson City stands just below the State, with just under 30 percent of ads being for these STEM occupations. Washoe had the lowest portion amongst the metro areas, at just 24 percent.

	April 2017 (Year-to-Date)		Change
	2017	2016	
Douglas	1,666	1,140	526
