## Structured Query Language Skills Specified in 2,300 Online STEM Job Postings in Last 12 Months (STEM skills in demand)

- Using the Labor Insight tool developed by Burning Glass Technologies, a supplier of “real time” labor market information, it is possible to assess the skills specified in online jobs ads via the Department of Employment, Training and Rehabilitation’s (DETR) Silver State Solutions initiative.
- During the year ending July 2016 there were 17,700 online job postings that specified skills for Science, Technology, Engineering, and Math (STEM) occupations in Nevada.
- Structured Query Language (SQL) skills had the largest quantity of job ads at 2,300 postings. Just below that, budgeting skills ranked second among skills specified for STEM occupations, in terms of online job ads.
- Budgeting, project management, scheduling, and customer service were the other skills specified in more than 2,000 job postings.
